## Eclipse Innovations presents HORIZON Small Respirators for Canada's Youth

*By Leanne DaRosa*

With school back in session, it is more important than ever to ensure our youth are as protected as they can be. While cloth and surgical masks provide some protection, they are no match for the highly contagious Delta variant of the COVID-19 virus. Protective measures are crucial in our schools, as the Delta variant is most deeply affecting the unvaccinated and many school-aged youth are currently ineligible for inoculation leaving them more susceptible to infection.

### *Meet the HORIZON Surgical Respirator with Horizontal Fold*

With few options in the respirator market for younger people, Eclipse Innovations offers the HORIZON horizontal fold respirator in size small, ideal for most youth ages 9-14 years old. With level 3 protection, it provides 95% particulate filter efficiency testing to Health Canada standards.

The HORIZON small provides protection from small particle aerosols with an enhanced face seal, preventing leakage around the respirator.

### *Features of the HORIZON Small Respirator*

The HORIZON is one of the first N95-equivalent respirators to be made in Canada. With its superior seal and moisture repellent exterior, the HORIZON provides surgical-grade protection to our youth in a variety of sizes, which makes it easy to fit for the entire family. Eclipse Innovations have applied leading-edge technology and best practices in mask design and manufacturing to create the ultimate in personal protective equipment.

This Health Canada authorized respirator is made with soft and breathable lightweight material, comfortable head straps and an adjustable nose piece. The HORIZON small provides a tight, comfortable seal for optimal protection in any setting.

For more information about the Canadian made HORIZON horizontal fold respirator in size small for youth 9-14 years of age, and where you can purchase them, please contact
